

Team 3 March Newsletter

Third grade students are thrilled to be in the middle of our Embryology unit for Unit Studies. Our eggs arrived today, and we should have chicks right before spring break. Ask your child to name the different parts of an egg the next time you crack one open.

Area 6 stated, "Embryology is fun and fascinating."

Sienna shared, "We are looking forward to holding our chicks!"

Our students also worked on learning the names of our seven continents and five oceans. They should also be able to tell you the names of our President, Governor, and Mayor.

Math fact practice is still a necessity for all of our students. We encourage everyone to continue practicing for faster recall. February was spent measuring. All students should know how to tell time, measure length, weight, and capacity using our customary units as well as the metric system.

The students from Area 6 reported, "It was hard to remember everything."

Trenton exclaimed, "I liked measuring weight the best!"

Geometry is our next unit. Shapes are fun!!

We moved quickly through theme 4 in reading. With only three stories and no vacations days, it was easy to do. The students practiced on monitoring and clarifying while they were reading. It is important to stop and check to make sure you are comprehending what you are reading. Hopefully, they'll continue to use this strategy when they read at home too. Our next theme revisits a reading strategy done at the beginning of the year, predicting and inferring. Encourage your son or daughter to practice these strategies as they read at home as well.
